

MyCafeCup Print Monitor (Beta)

Description : Draft Document for MyCafeCup Print Monitor Software.

Release Version : 0.71 (B)

Release Date : 4/29/2006 16:10:45 PM

Introduction.

MyCafeCup's Print Monitor is a software for monitoring the printers activity. Whenever the document has been add to the printer jobs, the software will notify the user.

Minimum Requirement.

- MyCafeCup Server Machine with Windows 9x/Me/XP/2000/2003
- Printers (Driver With "Printer Spooling Enabled")

Quick Start Guide

1. Enable all Printer Drivers in the system to use "Printer Spooling" (Printer's Properties/Port then check "Enable Printer Spooling")
2. Unzip the executable file named "PrintMonitor.exe" into the installed folder of MyCafeCup Server. (C:\Program Files\CafeCupPlatinum), then run it up.
3. The program
 - "Active Jobs" : Displays the jobs information that is being spool or printing.
 - "Finished Jobs" : Displays the jobs that has been printed. (Only since the program is running up)
 - "Minimize button" : To minimize the program to system tray. Whenever the jobs has been added to the spool, there will be an "Alert Window" displays on the bottom-right of screen.
 - "System Tray Icon" : Double click to restore the main screen.

FACT

Unfortunately, until today there still having the problems with both windows and printer drivers themselves. The Windows and Drivers oftenly reports incorrect information of the printing jobs, so the software might not collect the correct information. This like you may oftenly found that the windows said "the document has been printed successfully" but actually they were not printed. (This because of the problems with something between the Printer/Printer Driver and windows)

With the above reasons, We could not guarantee that this software will reports all jobs correctly.
